Tool PC Board

amplifies signal to Gen IV controller. control algorithm

Output Shaft

applies torque and is monitored by Transducer as well as Tool PC Board, ensuring both dual-start mechanisms are engaged

Tool Motor

Motor adjusts output power. Transfers power through gear box to Output Shaft

Gen IV iEC4W Controller

reads signal, adjusts motor power output, feeds information/ data to Tool Motor

HAVING A TRANSDUCERIZED CLOSED LOOP SYSTEM MEANS:

- Don't settle for guesswork! The built-in transducer ensures torque values are accurate. Dynamic torque is measured at the square drive, unlike the competition
- Torque measurement is unaffected by changes in gear efficiency, normal tool wear between calibrations, temperature, voltage, or motor performance
- On-tool LEDs for Accept/Reject signals
- The system can easily be verified and calibrated anywhere
- Interchangeable tools, cables, and controllers calibrations are specific to the tool not the system as a whole

Axial Type

Advantages

- High tool speeds
- · Able to work with a single operator
- · Automatic evaluation and data collection

ERGONOMICS

- Multiple handle configuration options for optimal tool handling
- Programmable acceleration to manage reaction bar behavior against reactive surface

• Production duty cycle durability —

QUALITY

• Torque measurement at the output — torque delivered is the torque

gearing tested to 100,000 cycles before

- · Broad range of programmable tightening strategies to handle joint characteristics
- On-board torque calibration against known standards to ensure accurate results

The Gen IV Field Controller (see page 14) is the core of the modular AcraDyne DC system. One controller will command any tool in the AcraDyne line — including the HT DC Angle Tool — from 1 Nm to 17,000 Nm, all with the same modular standard cable design.

HIGH TORQUE DC DUAL-LEVER BOLTING TOOLS

Provide Additional Safety by Avoiding Accidental Tool Start

FEATURES AND BENEFITS

- · Built-in integral transducer for optimal monitoring and control
- One of the most accurate high-torque tools in the world
- 250 Nm 17,000 Nm
- · Two-Hand No Tie Down Operation
 - No Tie Down Control: Operator must have both hands on and activating the dual-starting mechanisms simultaneously.
 Both hands must remain in position, activating the dual controls, at all times in order for the tool to operate.
- Additional safety when using a tool with a reaction bar or nose extension. Operator's hands remain on the controls and not in a position where they could be impacted by reaction devices
- Hands stay clear of application
- Helps avoid accidental starting of the tool
- Available in Fixtured (F), J-Handle (J), Straight (S), as well as dual-handle configurations
- Designed and MADE IN THE USA

AcraDyne's Nutrunners are designed with ultimate operator safety in mind. The optional dual-lever design helps prevent:

Injuries from Accidental Tool Start

Two-hand operation with no tiedown feature requires the operator to use both hands on the trigger simultaneously. This eliminates the possibility of accidental tool start and keeps both of the operator's hands out of harm's way.

Strain Caused by Awkward Tool Operation

Multiple handle styles ensure the safest, most ergonomic tool for your specific application.

Hand and Finger Trauma

Significantly reduce the risk of crushed or mutilated fingers from unintended tool start.

Protect your most valuable asset — your tool operator.

The supply of clean, dry air is essential to the operation of pneumatic powered tools. Use only clean filtered air for longer tool life. Provide proper airflow (CFM) and regulate air pressure (PSI) for optimum performance.

To determine unit size for application, you need to know:

- Total air flow (CFM) required for application
- Size of incoming air line and size of air line required by tool
- · Air supply pressure (PSI)
- Allowable pressure drop
- · Does the application require lubrication?
- Does the overall system have the required capacity?
